

SERVICE AND ACTIVITIES SPÁLOVSKÝ, A.S.

The Spálovský, a.s. company offers to its customers complex services in the area of manufacture of low-voltage switchboards, distribution boxes and electrotechnical wholesale.

Quality of the offered services is verified and certified in our own manufacture of switchboards within the quality management system ČSN EN ISO 9001 and others.

Scope of services:

- Analysis of networks – measuring voltage, current, frequency, active and reactive power, power factor, etc.
- Consultancy at design of switchboards directly at the customer, investor or design organisation
- Offer of inspection of switchboards in operation at regular intervals and before the end of the warranty period
- Operative solution of operational problems or breakdowns on distribution equipment with subsequent evaluation and submitting of a proposal for corrective measures or a technical solution
- Theoretical or practical training of switchboard operators at the place of operation before commissioning
- Technical support during proposal, design, operation tests and trial operation
- Delivery of documentation of the real execution in electronic form
- Field preparation of the order (in the case of reconstructions, replacement of devices or entire switchboard inserts)
- Specialist for retrofitting of LV substations

Technical equipment:

- Technical equipment – measuring instruments, hydraulic devices for bending, cutting and perforation of strips ALFRA, special hand tools with torque tightening of screws and crimping of cable lugs
- In addition to standard measurement and standard tests, we carry out measurements of warming of connections on bus-bars within manufacture of switchboards.
- Equipment for mobile processing of CU strips to the dimension of 120×10
- Perforex milling machining centre

A **service intervention** is always calculated according to the specific case.
